## DESCRIPTION

A-DRY BI/BM desiccant adsorption dryer has been designed to separate water moisture from compressed air thus reducing the dew point in the system. A-DRY BI/BM is a range of products offering our customers a wide array of dried air solutions with volumetric flow rates ranging from 6 Nm<sup>3</sup>/h to 200 Nm<sup>3</sup>/h.

An innovative new design of A-DRY BI/BM adsorption driers, developed with consideration of our customers, enables fast and reliable installation, use and servicing. Installation is simple with our ready to use controller while minimising the number of parts and motions required for assembly and disassembly makes servicing fast and reliable.

<sup>(1)</sup> Refers to 1 bar(a) and 20 °C at 7 bar operating pressure, inlet temperature 35 °C and pressure dew point at outlet -40 °C.  
<sup>(2)</sup> Outlet flow refers to typical assumption during regeneration phase for operating at nominal inlet flow conditions. Outlet flow includes average air losses of approximately 17,3 %.  
 \* If dryer is supplied without inlet filter compressed air class 1 (ISO 8753-1) for solid particles and oil should be provided to the inlet of the dryer.
