

FA1 SERIES

In line spin-on type filters

Inline filters with spin-on cartridge, suitable for use on suction, return or low pressure line.

Available with or without bypass, indicator port is a standard option to fit a visual or electrical indicator.

TECHNICAL INFORMATION

HOUSING

tested according to NFPA T3.10.17 , ISO3968

HYDRAULIC SYMBOL:

PRESSURE:

Max operating: 12 bar
Burst: 20 bar

CONNECTION PORTS:

G 3/4" ÷ 1 1/2"

MATERIALS:

Head: aluminium alloy
Bowl: painted steel
Seal: NBR

BYPASS:

No by-pass or:
0,25 bar setting (SUCTION)
1,7 bar setting (RETURN)

ELEMENT

tested according to ISO 2941, 2942, 2943, 3968, 16889, 23181

FILTER MEDIA:

Inorganic microfiber: G03 - G06 - G10 - G25
Paper: C10 - C25
Wire mesh: T60 - T125

DIFFERENTIAL COLLAPSE PRESSURE:

5 bar

OPERATING TEMPERATURE RANGE:

-25°C +100°C

FLUID COMPATIBILITY:

Full with HH-HL-HM-HV (acc. To ISO 2943).
For use with other fluid please contact Filtrec Customer Service
(info@filtrec.it).

8. INDICATOR	000	no indicator
	MPB (ex R9)	pressure gauge 0÷10 bar for return application
	PDB (ex R13)	pressure switch 1,3 bar SPDT
	MPO (ex R12)	pressure gauge 0÷16 bar for inline application
	Z1	differential visual 1,3 bar for size 30-31 inline application
	Z2	differential electric visual 1,3 bar
	Z20	differential visual 1,3 bar for size 40-41 inline application
	MPA (ex R7)	pressure/vacuum gauge -1÷5 bar for return and suction application
	MPS (ex S1)	vacuum gauge 0÷-1 bar for suction application
	PDS (ex S13)	vacuum switch -0,2 bar
ACCESSORIES	LC24	LED connector

The accessories must be ordered separately

PRESSURE DROP (Δp) INFORMATION FOR FILTER SIZING

The total Delta P through a filter assembly is given from Housing Δp + Element Δp . This ideally should not exceed 0,2 bar for suction application and 0,5 bar for return (it should never exceed 1/3 of the set value of the by-pass valve). N.B. All the reported data have been obtained at our laboratory, according to specification ISO3968 with mineral oil having 32 cSt viscosity and density 0,875 Kg/dm³.

HOUSING PRESSURE DROP

The housing Δp is given by the curve of the considered model and port, in correspondence of the flow rate value.

ELEMENT PRESSURE DROP

The element Δp (bar) is given by the flow rate (l/min) multiplied by the factor in the table here below corresponding to the selected media and divided by 1000. If the oil has a viscosity V_x different than 32 cSt a corrective factor $V_x/32$ must be applied.

Example: 40 l/min with A120C10 and oil viscosity 46 cSt $> 40 \times 0,67/1000 \times 46/32 = 0,04$ bar

Example: 80 l/min with A120G10 and oil viscosity 46 cSt $> 80 \times 2,33/1000 \times 46/32 = 0,27$ bar

	C10	C25	G03	G06	G10A	G25A	T60	T125
A110	1,90	1,70	6,50	6,00	3,60	2,80	0,90	0,60
A111	1,60	0,90	4,30	4,00	3,40	1,60	0,50	0,25
A120	0,67	0,57	4,33	3,67	2,33	1,23	0,27	0,23
A121	0,60	0,47	3,67	2,67	2,00	1,00	0,23	0,20
(*1) 2 x A120	0,34	0,29	2,17	1,84	1,17	0,62	0,14	0,12
(*2) 2 x A121	0,30	0,24	1,84	1,34	1,00	0,50	0,12	0,10

(*1) values for FA130 & FA140 - (*2) values for FA131 & FA141. These sizes are fitting 2 cartridges each

EXAMPLE OF TOTAL Δp CALCULATION (SUCTION)

FA120C10BB6SMPS with 40 l/min and oil 46 cSt:

Housing Δp 0,03 bar + element Δp 0,04 bar ($40 \times 0,67/1000 \times 46/32$) = total assembly Δp 0,07 bar.

EXAMPLE OF TOTAL Δp CALCULATION (RETURN/INLINE)

FA120G10BB6RMPB with 80 l/min and oil 46 cSt:

Housing Δp 0,1 bar + element Δp 0,27 bar ($80 \times 2,33/1000 \times 46/32$) = total assembly Δp 0,37 bar.

BYPASS VALVE PRESSURE DROP

The bypass valve Δp is given by the curve of the considered model and setting, in correspondence of the flow rate value.

SUCTION BYPASS

FA11x

FA12x - 3x -4x

RETURN/INLINE BYPASS

FA11x

FA12x - 3x -4x

N.B. All the reported data have been obtained at our laboratory, according to specification ISO3968 with mineral oil having 32 cSt viscosity and density 0,875 Kg/dm³.

USER TIPS

INDICATOR TIGHTENING TORQUE

MPO-MPS-MPB-MPA-PDB PDS	10 Nm
Z1-Z2-Z20	50 Nm

WARNING

- ⚠ Make sure that Personal Protective Equipment (PPE) is worn during installation and maintenance operation.

DISPOSAL OF FILTER ELEMENT

- ⚠ The used filter elements and the filter parts dirty of oil are classified as "Dangerous waste material": they must be disposed according to the local laws by authorized Companies.

INSTALLATION

- ⚠ 1. the IN and OUT ports must be connected to the hoses in the correct flow direction (an arrow shows on the filter head (1))
- 2. the filter housing should be preferably mounted with the cartridge (5) downward
- 3. secure to the frame the filter head (1) using the threaded fixing holes (3)
- 4. verify that no tension is present on the filter after mounting
- 5. enough space must be available for filter element cartridge replacement
- 6. the visual clogging indicator must be in a easily viewable position
- 7. when a electrical indicator is used, make sure that it is properly wired
- ⚠ 8. never run the system with no filter element fitted
- 9. keep in stock a spare FILTREC filter element for timely replacement when required

OPERATION

- ⚠ 1. the filter must work within the operating conditions of pressure, temperature and compatibility given in the first page of this data sheet
- 2. the filter element must be replaced as soon as the clogging indicator signals at working temperature (in cold start conditions, oil temperature lower than 30°C, a false alarm can be given due to oil viscosity)
- 3. If no clogging indicator is mounted, replace the element according to the system manufacturer's recommendations

MAINTENANCE

- ⚠ 1. make sure that the system is switched off and there is no residual pressure in the filter
- 2. unscrew the filter cartridge (5) by turning it anti-clockwise and remove it
- 3. fit a new FILTREC cartridge element (5), verifying the part number, particularly concerning the micron rating
- 4. ensure that the head mounting face is clean
- ⚠ 5. lubricate the gasket of the replacement cartridge and the thread prior to assembly
- 7. spin on the new cartridge until it reaches the mounting face and tighten for 3/4 turn.
